CBN AML BASELINE STANDARDS

Gap Assessment Report

Circular BSD/DIR/PUB/LAB/019/002 — 22/04/2026

INSTITUTION Johndup	INSTITUTION TYPE Deposit Money Bank (DMB)
CBN RISK CLASSIFICATION Medium	REPORT DATE 22/04/2026
ROADMAP DEADLINE 10 June 2026	FULL COMPLIANCE DEADLINE 2027-09-10

⚠ CRITICAL

Johndup operates entirely manual AML processes. Zero governance controls are in place. All 12 CBN Baseline Standards constitute Critical Gaps. Immediate executive intervention required.

07 Implementation Roadmap p.15

08 Product Suite & Advisory p.17

SECTION ONE

01 Executive Summary

> **Johndup is a standalone Deposit Money Bank operating in a single state with a customer base under 10,000, processing 1,000–50,000 daily transactions. The institution is rated Medium risk by the CBN and maintains PEP exposure through its retail deposit and trade finance operations.**

CBN Circular BSD/DIR/PUB/LAB/019/002, issued March 10, 2026, mandates that all DMBs deploy automated AML/CFT/CPF solutions within 18 months. Manual controls are no longer acceptable. The circular requires real-time transaction monitoring, AI-driven anomaly detection, and full integration between AML systems and core banking platforms. A 12-section Implementation Roadmap must be submitted by June 10, 2026.

Johndup currently operates entirely manual AML processes across all functional areas including CDD/KYC, sanctions screening, transaction monitoring, fraud detection, case management, and regulatory reporting. Zero of twelve Baseline Standards are compliant. Governance score is 0/10 — no MLRO, no board-approved policy, no BVN/NIN integration, no internal audit coverage of AML. All 12 standards constitute Critical Gaps.

Johndup faces a hard June 10, 2026 deadline for roadmap submission — 26 days from this assessment. Non-submission constitutes regulatory non-compliance. OPEX Consulting can complete the CBN template using these findings and coordinate vendor selection, policy drafting, and phased implementation to meet the September 2027 compliance deadline.

⚠ CBN Circular BSD/DIR/PUB/LAB/019/002 states: 'Manual AML controls are no longer sufficient. All DMBs must deploy automated solutions supporting real-time monitoring, AI/ML anomaly detection, and full integration with core banking systems within 18 months.'

0/12 STANDARDS COMPLIANT	**12** CRITICAL GAP RATINGS	**0** GAP IDENTIFIED RATINGS

SECTION TWO

02 Institution Profile & Assessment Scorecard

INSTITUTION	**Johndup**
INSTITUTION TYPE	Deposit Money Bank (DMB)
CBN RISK CLASSIFICATION	Medium
DAILY TRANSACTION VOLUME	1K-50K
GEOGRAPHIC FOOTPRINT	Single state
GROUP / HOLDING STRUCTURE	Standalone
ELEVATED RISK INDICATORS	PEP exposure
ROADMAP SUBMISSION DEADLINE	**10 June 2026**
FULL COMPLIANCE DEADLINE	2027-09-10

ℹ **Why Johndup's status matters.** As a DMB, Johndup faces the strictest compliance timeline — 18 months to full compliance. Trade finance and PEP exposure elevate sanctions screening requirements under 5.3.

SECTION THREE

03 Requirement Categories — Mandatory vs Conditional

The CBN Baseline Standards apply differentially based on institution type, risk classification, and product profile. Johndup's status as a DMB with PEP exposure triggers all mandatory requirements plus conditional obligations for enhanced sanctions screening and trade finance monitoring.

MANDATORY Applies to all without exception

CONDITIONAL Activated by risk/type

5.X CBN circular section

REQUIREMENT AREA	CBN REF	CATEGORY	TRIGGER FOR JOHNDUP
Integrated AML Solution — core functional footprint	5.1(A)	MANDATORY	All DMBs must deploy automated solutions supporting 9 functional areas including CDD, sanctions, monitoring, reporting, and audit.
CDD, KYC and KYB — real-time identity corroboration	5.2(B)(I)	MANDATORY	All institutions must integrate BVN/NIN for real-time identity verification. Manual batch processes are non-compliant.
Sanctions and PEP Screening — real-time interdiction	5.3(A)(VIII)	MANDATORY	All institutions must screen against domestic and international lists with automated transaction hold on confirmed matches.
Sanctions Screening — enhanced coverage for PEP exposure	5.3(A)(II)	CONDITIONAL	Johndup's PEP exposure requires screening against OFAC, UN, EU, and UK HMT lists beyond CBN/EFCC domestic coverage.

REQUIREMENT AREA	CBN REF	CATEGORY	TRIGGER FOR JOHNDUP
Customer Risk Assessment — dynamic scoring with AI governance	5.4(A)(IV)	MANDATORY	All institutions must implement dynamic risk scoring. AI/ML models require documented governance framework with human oversight.
Transaction Monitoring — real-time multi-scenario analysis	5.5(B)(I)	MANDATORY	DMBs must deploy real-time monitoring across payment channels. Manual review of transaction logs is non-compliant.
Transaction Monitoring — automated alert closure criteria	5.5(B)(VII)	MANDATORY	Automated closure requires governance approval, KYC/transactional context, low customer risk, and no unresolved alerts.
Transaction Monitoring — documented Alert Review SLAs	5.5(B)(VI)	MANDATORY	All institutions must document and enforce SLAs for alert investigation and escalation.
Fraud Monitoring and Detection	5.6(A)	MANDATORY	All institutions must deploy real-time fraud monitoring. Johndup currently has no fraud detection capability.
Case Management — Enterprise Case Management with audit trails	5.7(A)	MANDATORY	All institutions must implement ECM with Maker-Checker workflows and immutable audit logs.
Regulatory Reporting — automated	5.8(A)	MANDATORY	All institutions must automate regulatory filing. Manual goAML portal submission does

REQUIREMENT AREA	CBN REF	CATEGORY	TRIGGER FOR JOHNDUP
STR/SAR/CTR/FTR generation			not satisfy 5.8 automation requirements.
Audit and Governance — immutable audit trails	5.9(A)	MANDATORY	All institutions must maintain tamper-proof logs of all AML system activity for regulatory examination.
System Integration and Scalability — prohibition on standalone feeds	5.10(D)	MANDATORY	DMBs are prohibited from using standalone transaction feeds. Full bidirectional integration with core banking is mandatory.
Security and Data Protection — encryption and MFA	5.11(A)	MANDATORY	All institutions must implement encryption at rest/transit and enforce MFA. Johndup currently has neither.
Security and Data Protection — Business Impact Analysis	5.11(C)	MANDATORY	All institutions must conduct BIA with defined RTO/RPO for AML systems. Johndup has no BIA.
User Interface and Customisation — real-time dashboards	5.12(A)	MANDATORY	All institutions must provide real-time AML metrics dashboards for compliance officers and investigators.
Board-Approved AML/CFT/CPF Policy	SECTION 6	MANDATORY	All institutions must maintain board-approved AML policy. Johndup has no documented policy.
Vendor and Third-Party Management Policy	SECTION 6	MANDATORY	All institutions must document vendor management

REQUIREMENT AREA	CBN REF	CATEGORY	TRIGGER FOR JOHNDUP
			frameworks for AML solution providers.
CBN Implementation Roadmap Submission	CIRCULAR BSD/DIR/PUB/LAB/019/002	MANDATORY	All institutions must submit 12-section roadmap by June 10, 2026. Incomplete submissions constitute non-compliance.

Johndup must address all 12 Baseline Standards. As a DMB, standalone transaction feeds are prohibited under 5.10(d). Full integration with core banking and KYC systems is mandatory.

SECTION FOUR

04 Gap Analysis — 12 CBN Baseline Standards

5.1 Integrated AML Solution

CRITICAL GAP

MANDATORY FOR ALL DMBS | 9 FUNCTIONAL AREAS REQUIRED

Johndup has no automated AML platform. Standard 5.1(a) requires integrated solutions supporting CDD/KYC, sanctions screening, risk assessment, transaction monitoring, fraud detection, case management, reporting, audit trails, and data protection. Manual processes across all areas constitute non-compliance.

REQUIRED ACTION

Deploy integrated AML platform supporting all 9 functional areas before September 2027 compliance deadline. Initiate vendor selection immediately to allow 18-month implementation runway.

REGTECH365 SOLUTION

RegPort provides the core integrated platform addressing CDD/KYC, sanctions, transaction monitoring, and regulatory reporting with purpose-built NIBSS/goAML integration for Nigerian DMBs.

→ RegPort

5.2 CDD, KYC and KYB

CRITICAL GAP

BVN/NIN INTEGRATION MANDATORY | REAL-TIME VERIFICATION REQUIRED

> Johndup conducts manual KYC with batch BVN lookups. Standard 5.2(b)(i) mandates real-time identity corroboration via BVN/NIN linkage at account opening and periodic refresh. Manual processes cannot satisfy real-time requirements. UBO mapping is manual, creating trade finance compliance risk.

REQUIRED ACTION

Implement real-time BVN/NIN integration via NIBSS APIs. Automate UBO mapping for corporate accounts. Deploy dynamic KYC refresh triggers based on risk score changes.

REGTECH365 SOLUTION

RegPort integrates directly with NIBSS for real-time BVN/NIN verification, automated UBO mapping, and dynamic KYC refresh workflows triggered by risk score escalation or transaction anomalies.

→ RegPort

5.3 Sanctions and PEP Screening

CRITICAL GAP

REAL-TIME SCREENING MANDATORY | ENHANCED COVERAGE FOR PEP EXPOSURE

> Johndup screens manually against CBN/EFCC lists only. Standard 5.3(a)(viii) requires real-time screening with automated transaction interdiction on confirmed matches. PEP exposure triggers enhanced coverage requirements — OFAC, UN, EU, UK HMT lists are mandatory. Fuzzy matching and name variant detection are absent.

REQUIRED ACTION

Deploy real-time sanctions screening with fuzzy matching across domestic and international lists. Implement automated transaction hold on confirmed matches. Expand coverage to OFAC, UN, EU, UK HMT.

REGTECH365 SOLUTION

RegPort delivers real-time AI-driven sanctions screening with fuzzy matching, name variant detection, and automated interdiction. Pre-configured list coverage includes CBN/EFCC, OFAC, UN, EU, UK HMT with daily updates.

→ RegPort

5.4 Customer Risk Assessment

CRITICAL GAP

DYNAMIC SCORING REQUIRED | AI GOVERNANCE FRAMEWORK MANDATORY

> Johndup conducts manual risk assessments at onboarding with no dynamic refresh. Standard 5.4(a)(iv) requires automated risk scoring that updates based on transactional behavior, KYC changes, and external triggers. AI/ML models require documented governance framework with human oversight and explainability — currently absent.

REQUIRED ACTION

Implement dynamic risk scoring engine with automated refresh triggers. Establish Model Governance Committee to oversee AI/ML risk models. Document explainability and human oversight protocols.

REGTECH365 SOLUTION

RegPort provides dynamic risk scoring with automated refresh based on transaction patterns, KYC updates, and sanctions hits. RegComply delivers the governance framework for model oversight and audit trail documentation.

→ RegPort → RegComply

5.5 Transaction Monitoring and Risk-Based Analyses

CRITICAL GAP

REAL-TIME MONITORING MANDATORY | ALERT SLA DOCUMENTATION REQUIRED

> Johndup reviews transaction logs manually. Standard 5.5(b)(i) mandates real-time multi-scenario monitoring across all payment channels. Automated alert closure is prohibited unless 4 strict criteria are met: governance approval, KYC/transactional context, low customer risk, no unresolved alerts. Johndup has no documented Alert Review SLAs, violating 5.5(b)(vi).

REQUIRED ACTION

Deploy real-time transaction monitoring with multi-scenario rule engine. Document and enforce Alert Review SLAs. Establish governance-approved criteria for automated low-risk alert closure.

REGTECH365 SOLUTION

RegPort delivers real-time transaction monitoring with configurable scenario library and network analysis. RegComply enforces documented Alert Review SLAs and governance-approved automated closure criteria with full audit trails.

→ RegPort → RegComply

5.6 Fraud Monitoring and Detection

CRITICAL GAP

REAL-TIME FRAUD MONITORING MANDATORY | UNIFIED AML-FRAUD ARCHITECTURE REQUIRED

> Johndup has no fraud monitoring capability. Standard 5.6(a) requires real-time fraud detection across digital channels. As a DMB, Johndup must roadmap toward a Unified Financial Crime Risk Architecture per 5.6(b)(i), where fraud signals feed into AML risk scoring. Current manual processes create regulatory and operational risk.

REQUIRED ACTION

Deploy real-time fraud monitoring across ATM/POS channels. Establish fraud-to-AML risk feed to create unified financial crime architecture. Document roadmap for full integration.

REGTECH365 SOLUTION

RegGuard provides real-time fraud monitoring with behavioral analytics and device fingerprinting. Fraud signals feed directly into RegPort's risk scoring engine, creating the unified architecture required by 5.6(b)(i).

→ RegGuard → RegPort

5.7 Case Management

CRITICAL GAP

ENTERPRISE CASE MANAGEMENT MANDATORY | MAKER-CHECKER WORKFLOWS REQUIRED

> Johndup manages alerts and investigations manually with informal approval processes. Standard 5.7(a) requires Enterprise Case Management with Maker-Checker workflows, immutable audit trails, and structured investigation documentation. Manual case files cannot satisfy examination requirements for tamper-proof evidence chains.

REQUIRED ACTION

Implement ECM with Maker-Checker workflows for alert escalation, investigation, and STR filing. Ensure immutable audit trails for all case activity.

REGTECH365 SOLUTION

RegComply delivers Enterprise Case Management with enforced Maker-Checker workflows, immutable audit logs, and structured investigation templates. All case activity is timestamped and tamper-proof for CBN examination.

→ RegComply

5.8 Regulatory Reporting

CRITICAL GAP

AUTOMATED STR/SAR/CTR/FTR GENERATION MANDATORY

> Johndup files STRs manually via goAML portal with informal approval. Standard 5.8(a) requires automated generation of STR, SAR, CTR, and FTR with structured data validation and audit trails. Manual portal submission does not satisfy automation requirements. Informal approval violates documented workflow requirements.

REQUIRED ACTION

Automate regulatory report generation with structured data validation. Implement formal Maker-Checker approval workflows. Integrate with goAML for automated submission.

REGTECH365 SOLUTION

RegPort automates STR/SAR/CTR/FTR generation with pre-validation against goAML schema requirements. RegComply enforces Maker-Checker approval workflows with full audit trails before automated submission.

→ RegPort → RegComply

5.9 Audit and Governance

CRITICAL GAP

IMMUTABLE AUDIT TRAILS MANDATORY

ANNUAL AI/ML VALIDATION REQUIRED

> Johndup maintains manual audit logs with no tamper-proof controls. Standard 5.9(a) requires immutable audit trails for all AML system activity. Internal audit does not cover AML, violating governance requirements. If AI/ML is deployed, 5.5(b)(i) mandates annual independent validation — currently no framework exists.

REQUIRED ACTION

Implement tamper-proof audit logging for all AML activity. Establish internal audit coverage of AML with quarterly reviews. Prepare AI/ML validation framework for future deployment.

REGTECH365 SOLUTION

RegComply provides immutable audit trails with cryptographic timestamping for all system activity. Audit reports are auto-generated for internal audit and CBN examination. AI/ML validation framework is built-in.

→ RegComply

5.10 System Integration and Scalability

CRITICAL GAP

FULL CORE BANKING INTEGRATION MANDATORY | STANDALONE FEEDS PROHIBITED FOR DMBS

> Johndup has no AML system to integrate. Standard 5.10(d) explicitly prohibits standalone transaction feeds for DMBs. Full bidirectional API integration with core banking and KYC systems is mandatory. Manual data extraction cannot satisfy real-time monitoring requirements under 5.5.

REQUIRED ACTION

Deploy AML platform with secure bidirectional API integration to core banking. Ensure real-time transaction feeds and KYC data synchronization. Document integration architecture for CBN examination.

REGTECH365 SOLUTION

RegPort integrates via secure REST APIs with Nigerian core banking platforms including Finacle, T24, and BankOne. Real-time transaction feeds and KYC synchronization are standard. Integration architecture documentation is auto-generated.

→ RegPort

5.11 Security and Data Protection

CRITICAL GAP

ENCRYPTION AND MFA MANDATORY | BIA WITH RTO/RPO REQUIRED

> Johndup has no encryption or MFA for AML data. Standard 5.11(a) requires encryption at rest and in transit plus enforced MFA. No Business Impact Analysis exists for AML systems, violating 5.11(c) requirements for defined RTO/RPO. Data sovereignty is confirmed (Nigeria), satisfying NDPA requirements.

REQUIRED ACTION

Implement AES-256 encryption at rest and TLS 1.3 in transit. Enforce MFA for all AML system access. Conduct BIA with defined RTO/RPO for AML platform.

REGTECH365 SOLUTION

RegPort enforces AES-256 encryption, TLS 1.3, and mandatory MFA. RegComply includes BIA templates with RTO/RPO documentation. All data is hosted in Nigeria, ensuring NDPA compliance.

→ RegPort → RegComply

5.12 User Interface and Customisation

CRITICAL GAP

REAL-TIME DASHBOARDS MANDATORY

> Johndup has no AML dashboards. Standard 5.12(a) requires real-time metrics for alert volumes, case status, STR filings, and risk distribution. Investigators need efficient navigation tools for case review. Manual spreadsheets cannot satisfy real-time requirements or examination readiness.

REQUIRED ACTION

Deploy real-time AML dashboards for compliance officers and investigators. Ensure efficient case navigation and drill-down capabilities. Provide role-based access controls.

REGTECH365 SOLUTION

RegComply delivers real-time dashboards with configurable widgets for alert volumes, case aging, STR status, and risk heatmaps. Role-based access ensures investigators see only relevant cases. Drill-down to transaction details is one-click.

→ RegComply

SECTION FIVE

05 Governance Assessment — Section 6 Controls

The CBN Baseline Standards require a comprehensive governance framework spanning policy, oversight, and operational controls. Johndup has zero of ten mandatory governance controls in place, creating critical examination risk. The following assessment maps each control to CBN requirements and remediation actions.

0%

Governance Score — Critical Gap

Zero governance controls are in place. Johndup has no MLRO, no board-approved AML policy, no BVN/NIN integration, no vendor management framework, and no internal audit coverage of AML. This constitutes critical non-compliance. CBN examination would result in immediate regulatory action.

GOVERNANCE CONTROL	CBN REF	CATEGORY	JOHNDUP STATUS	ACTION REQUIRED
Formally designated MLRO or CCO	SECTION 6	MANDATORY	Not in place	Appoint MLRO with board approval and documented terms of reference before roadmap submission.
Board-approved AML/CFT/CPF Policy	SECTION 6	MANDATORY	Not in place	Draft and obtain board approval for comprehensive AML/CFT/CPF policy before June 10, 2026.
Documented AML Solution Governance Framework	5.9	MANDATORY	Not in place	Establish governance framework covering system ownership, change control, and escalation protocols.
Formal Change Control for AML Configurations	5.9	MANDATORY	Not in place	Implement change control process with Maker-Checker approval for scenario rules and thresholds.
Model Governance Committee for AI/ML	5.4(A)(IV)	CONDITIONAL	Not in place	Establish committee before AI/ML deployment to oversee model validation and explainability.
Documented Alert Review SLAs	5.5(B)(VI)	MANDATORY	Not in place	Document SLAs for alert investigation, escalation, and closure before system deployment.
Vendor/Third-Party Management Policy	SECTION 6	MANDATORY	Not in place	Establish vendor management framework covering due diligence, SLAs, and exit planning.
Data Retention and Destruction Policy	5.11	MANDATORY	Not in place	Document retention periods for AML data and secure destruction protocols.

GOVERNANCE CONTROL	CBN REF	CATEGORY	JOHNDUP STATUS	ACTION REQUIRED
BVN/NIN Integration	5.2(B)(I)	MANDATORY	Not in place	Implement real-time BVN/NIN integration via NIBSS APIs before September 2027.
AML Training Programme with Documented Records	SECTION 6	MANDATORY	Not in place	Deploy digital training platform with certification tracking for all staff.

SECTION SIX

06 Top 5 Priority Actions

01 CBN Implementation Roadmap Submission

HARD DEADLINE: 10 JUNE 2026 · MANDATORY FOR ALL INSTITUTIONS

Johndup must submit the 12-section CBN Implementation Roadmap Template by June 10, 2026 — 26 days from this assessment. The template requires executive summary, gap analysis, implementation strategy, timeline, resource plan, vendor selection status, governance framework, training plan, testing protocols, risk mitigation, budget, and board sign-off. Incomplete submissions constitute non-compliance. OPEX Consulting can complete this template using these assessment findings, coordinate vendor selection documentation, and prepare board presentation materials. Immediate engagement is required to meet the June 10 deadline.

02 MLRO Appointment and Board AML Policy Approval

REQUIRED BEFORE ROADMAP SUBMISSION · JUNE 2026

Johndup must appoint a formally designated MLRO or CCO with documented terms of reference and board approval. The MLRO must have direct board access and authority over AML operations. Concurrently, the board must approve a comprehensive AML/CFT/CPF policy covering risk appetite, governance structure, escalation protocols, and regulatory reporting obligations. OPEX Consulting can draft the AML/CFT/CPF

policy template, prepare MLRO terms of reference, and coordinate board approval process. These governance foundations are prerequisites for credible roadmap submission.

03 AML Platform Vendor Selection and Contracting

COMPLETE BY AUGUST 2026 · 18-MONTH IMPLEMENTATION RUNWAY REQUIRED

Johndup has seen vendor demos but has not selected a platform. Budget constraints are the primary concern. The 18-month compliance timeline requires vendor selection and contracting by August 2026 to allow adequate implementation runway. Delayed vendor selection compresses implementation timelines and increases delivery risk. OPEX Consulting can conduct structured vendor evaluation using CBN Baseline Standards as scoring criteria, negotiate commercial terms, and coordinate proof-of-concept testing. RegTech365 offers flexible commercial models including phased deployment to manage budget constraints.

04 BVN/NIN Real-Time Integration via NIBSS

CRITICAL DEPENDENCY FOR 5.2 COMPLIANCE · COMPLETE BY Q1 2027

Johndup conducts manual batch BVN lookups. Standard 5.2(b)(i) mandates real-time identity corroboration at account opening and periodic refresh. NIBSS API integration is the only compliant approach. This is a critical dependency for CDD/KYC compliance and must be completed before transaction monitoring deployment. RegPort includes pre-built NIBSS integration with real-time BVN/NIN verification, automated UBO mapping, and dynamic KYC refresh workflows. OPEX Consulting can coordinate NIBSS onboarding and API testing.

05 Internal Audit Coverage of AML Systems

ESTABLISH BY Q2 2027 · QUARTERLY REVIEWS REQUIRED

Johndup's internal audit does not cover AML. Standard 5.9 requires independent validation of AML controls including scenario effectiveness, alert quality, and governance compliance. Quarterly internal audit reviews are required to demonstrate ongoing compliance and identify control gaps before CBN examination. OPEX Consulting offers internal audit co-sourcing for AML systems including scenario testing, alert sampling, and governance framework validation. RegComply auto-generates audit reports with evidence packs for internal audit and CBN examination.

SECTION SEVEN

07 Recommended Implementation Roadmap

The following roadmap spans 28 months from May 2025 to September 2027, structured in four phases aligned to CBN compliance milestones. Phase 1 focuses on governance baseline and roadmap submission. Phase 2 establishes architecture and policy frameworks. Phase 3 deploys core AML systems. Phase 4 ensures examination readiness through audit, training, and evidence pack preparation.

PHASE 1 MAY 2025 – JUNE 2026 (3 MONTHS)

Foundation and Roadmap Submission

Establish governance baseline and submit CBN Implementation Roadmap by June 10, 2026 deadline. Appoint MLRO with board-approved terms of reference. Draft and obtain board approval for AML/CFT/CPF policy. Conduct vendor evaluation and select AML platform provider. Document current-state gap analysis and implementation strategy. Prepare 12-section roadmap template with executive summary, timeline, resource plan, and board sign-off.

- MLRO appointment with board-approved terms of reference
- Board-approved AML/CFT/CPF policy
- Vendor selection and contract execution
- CBN Implementation Roadmap Template submitted by June 10, 2026
- Current-state gap analysis documentation

PHASE 2 JULY 2026 – SEPTEMBER 2026 (3 MONTHS)

Governance and Architecture Design

Establish AML Solution Governance Framework covering system ownership, change control, and escalation protocols. Design integration architecture for core banking, NIBSS BVN/NIN APIs, and goAML portal. Document Alert Review SLAs and automated closure criteria. Establish Model Governance Committee for future AI/ML deployment. Draft vendor management policy and data retention policy. Conduct Business Impact Analysis with defined RTO/RPO for AML systems.

- AML Solution Governance Framework documentation
- Integration architecture design for core banking and NIBSS
- Documented Alert Review SLAs
- Model Governance Committee charter
- Vendor management and data retention policies
- Business Impact Analysis with RTO/RPO

PHASE 3 OCTOBER 2026 – MAY 2027 (8 MONTHS)

System Deployment and Integration

Deploy RegPort for CDD/KYC, sanctions screening, transaction monitoring, and regulatory reporting. Implement real-time BVN/NIN integration via NIBSS APIs. Deploy RegGuard for fraud monitoring with feed to AML risk scoring. Implement RegComply for case management, audit trails, and dashboards. Configure transaction monitoring scenarios for retail deposits, trade finance, and ATM/POS channels. Conduct user acceptance testing and parallel run with manual processes. Migrate historical customer data and risk profiles.

RegPort deployment with NIBSS BVN/NIN integration | RegGuard fraud monitoring with AML risk feed | RegComply case management and dashboards | Transaction monitoring scenario library configured | User acceptance testing completed | Historical data migration and validation

PHASE 4 JUNE 2027 – SEPTEMBER 2027 (4 MONTHS)

Assurance and Examination Readiness

Conduct internal audit of AML systems including scenario effectiveness, alert quality, and governance compliance. Deploy RegLearn for staff AML training with certification tracking. Prepare CBN examination evidence pack including audit trails, case samples, STR filings, and governance documentation. Conduct scenario tuning based on alert quality metrics. Validate AI/ML models if deployed. Finalize data retention and destruction protocols. Conduct board briefing on compliance status and examination readiness.

Internal audit report on AML systems | Staff AML training completion via RegLearn | CBN examination evidence pack | Scenario tuning and alert quality validation | AI/ML model validation if applicable | Board briefing on compliance status

MILESTONE	TARGET DATE	OWNER
CBN Implementation Roadmap submitted	May 2026	MLRO / OPEX Consulting
AML platform vendor contracted	June 2026	Procurement / OPEX Consulting
BVN/NIN integration live	December 2026	IT / RegTech365
Transaction monitoring scenarios deployed	April 2027	Compliance / RegTech365
Internal audit of AML systems completed	April 2028	Internal Audit / OPEX Consulting
Full compliance achieved	August 2028	MLRO / Board

SECTION EIGHT

08 RegTech365 Product Suite & Advisory

OPEX Consulting and RegTech365 deliver end-to-end AML compliance solutions for Nigerian financial institutions. Our integrated approach combines regulatory advisory, policy development, platform

deployment, and ongoing assurance. We have supported over 40 Nigerian institutions through CBN compliance programmes including the 2019 AML/CFT Regulations and the 2026 Baseline Standards.

💡 **What makes this different.** OPEX Consulting is the only Nigerian advisory firm offering integrated RegTech365 platform deployment with regulatory consulting. We complete CBN roadmap templates, draft board-approved policies, conduct vendor evaluations, and provide internal audit co-sourcing — ensuring seamless compliance from strategy to examination readiness.

RE

RegPort

Integrated AML Platform for CBN Baseline Standards Compliance

`5.1 — Integrated AML Solution` `5.2 — CDD/KYC/KYB` `5.3 — Sanctions & PEP Screening` `5.5 — Transaction Monitoring` `5.8 — Regulatory Reporting` `5.10 — System Integration`

RegPort unifies CDD/KYC, sanctions/PEP screening, transaction monitoring, customer risk assessment, and regulatory reporting in a single platform. The platform is purpose-built for Nigerian financial institutions, featuring real-time BVN/NIN integration via NIBSS, automated goAML/NFIU filing, and AI-enabled fuzzy matching for international sanctions lists.

RE

RegGuard

Real-Time Fraud Monitoring with Bidirectional Risk Feed

`5.6 — Fraud Monitoring and Detection`

RegGuard provides real-time fraud monitoring for card issuance, mobile money, and agent network channels. It detects pattern-based fraud like SIM swap attacks and account takeover, with an automated feed that pushes fraud alerts directly into customer risk scores to identify money laundering disguised as fraud.

RE

RegComply

Enterprise Case Management with Immutable Audit Trails

`5.4 — Risk Assessment Governance` `5.7 — Case Management` `5.9 — Audit and Governance` `5.11 — Security & Data Protection` `5.12 — UI & Dashboards`

RegComply delivers the mandatory Case Management and Governance Audit layer. It enforces Maker-Checker workflows for investigation, provides role-based access for MLROs, and maintains tamper-proof audit logs of all configuration changes and alert dispositions required for CBN examination.

RegLearn

AML Training Programme with Documented Records

Section 6 — AML Training Programme

RegLearn provides role-specific AML/CFT/CPF training modules covering the 12 Baseline Standards. The platform tracks staff completion, assessment scores, and certification status, producing the documented training records specifically mandated under Section 6.7 of the Circular.

OPEX Consulting Advisory Services

- **CBN Roadmap Template completion** — End-to-end support in completing and validating the mandatory 12-section roadmap for June 10th submission.
- **MLRO appointment advisory** — Guidance on role definition, reporting lines, and CBN notification for newly appointed MLROs.
- **ISO 27001 and 42001 alignment** — Gap analysis and implementation support for international security and AI governance standards.
- **Governance framework drafting** — Drafting of AML Solution Governance, Change Control, and Data Retention policies.
- **Budget-Constrained Phased Deployment Planning** — OPEX can structure phased implementation with prioritised module deployment to manage budget constraints while meeting compliance deadlines.
- **AML/CFT/CPF policy drafting** — Development of Board-approved policies aligned with the new 2026 Baseline Standards and ISO 42001.
- **Evidence pack preparation** — Compilation of all technical and governance documentation into an audit-ready format for CBN examination.
- **Vendor due diligence** — Structured evaluation of RegTech platform providers against CBN technical requirements.
- **Trade Finance AML Controls Design** — Johndup's trade finance operations require specialised transaction monitoring scenarios for LC fraud, dual-use goods, and sanctions evasion.

Schedule Your CBN Roadmap Consultation

OPEX Consulting can complete your CBN Implementation Roadmap Template and coordinate vendor selection within 3 weeks.
