CBN AML BASELINE STANDARDS

Gap Assessment Report

Circular BSD/DIR/PUB/LAB/019/002 — 15/04/2026

INSTITUTION Johndup	INSTITUTION TYPE Deposit Money Bank
CBN RISK CLASSIFICATION Medium	REPORT DATE 15/04/2026
ROADMAP DEADLINE 10 June 2026	FULL COMPLIANCE DEADLINE September 2027

⚠ CRITICAL

DMBs face heightened CBN scrutiny. Manual processes with PEP exposure and zero governance baseline constitute examination-critical deficiencies requiring urgent remediation.

06 Top 5 Priority Actions p.13

07 Implementation Roadmap p.15

08 Product Suite & Advisory p.17

SECTION ONE

01 Executive Summary

> Johndup is a standalone Deposit Money Bank operating in a single state with a customer base under 10,000 and daily transaction volumes of 1,000–50,000. The institution faces PEP exposure risk and operates entirely manual AML processes.

CBN Circular BSD/DIR/PUB/LAB/019/002 issued March 2026 mandates all Deposit Money Banks deploy integrated AML solutions meeting 12 baseline standards by September 2027. Johndup must submit a detailed Implementation Roadmap by 10 June 2026 — 135 days from now.

This assessment identifies Critical Gaps across all 12 standards. Johndup operates entirely manual AML processes with zero governance controls in place. No MLRO appointed, no board-approved policy, no BVN integration, no internal audit coverage. Governance score: 0/10 (Critical).

Immediate action required. Roadmap submission is non-negotiable. Failure to submit constitutes regulatory non-compliance. OPEX Consulting can complete the CBN template using these findings and guide platform selection within budget constraints identified.

⚠ CBN Circular states: 'Institutions without designated MLRO/CCO and board-approved AML policy by roadmap submission date will be subject to immediate supervisory intervention and potential sanctions.'

0/12 STANDARDS COMPLIANT	**12** CRITICAL GAP RATINGS	**0** GAP IDENTIFIED RATINGS
0/10 controls in place GOVERNANCE CONTROLS	**Manual processes only** AML SYSTEM STATUS	**PEP exposure** FRAUD EXPOSURE RISK LEVEL

SECTION TWO

02 Institution Profile & Assessment Scorecard

INSTITUTION	**Johndup**
INSTITUTION TYPE	Deposit Money Bank
CBN RISK CLASSIFICATION	Medium
DAILY TRANSACTION VOLUME	1K–50K
GEOGRAPHIC FOOTPRINT	Single state
GROUP / HOLDING STRUCTURE	Standalone entity
ELEVATED RISK INDICATORS	PEP exposure
ROADMAP SUBMISSION DEADLINE	10 June 2026
FULL COMPLIANCE DEADLINE	September 2027

ℹ **Why Johndup's status matters.** Deposit Money Banks are Tier 1 supervised entities under CBN prudential framework. Manual AML processes are incompatible with DMB licensing requirements and expose Johndup to immediate supervisory action.

SECTION THREE

03 Requirement Categories — Mandatory vs Conditional

CBN Circular BSD/DIR/PUB/LAB/019/002 establishes 12 mandatory baseline standards plus governance prerequisites. All requirements apply unconditionally to Deposit Money Banks regardless of size or geographic footprint.

MANDATORY Applies to all without exception

CONDITIONAL Activated by risk/type

5.X CBN circular section

REQUIREMENT AREA	CBN REF	CATEGORY	TRIGGER FOR JOHNDUP
Integrated AML Solution — core functional footprint	5.1(A)	MANDATORY	Applies to all DMBs unconditionally. Manual processes do not satisfy integrated solution requirement.
CDD/KYC/KYB — automated identity verification	5.2(A)	MANDATORY	DMB retail deposit products require automated CDD. Manual BVN lookups constitute non-compliance.
Sanctions & PEP Screening — real-time capability	5.3(A)	MANDATORY	PEP exposure confirmed. Manual screening against domestic lists only is insufficient for DMB risk profile.
Customer Risk Assessment — dynamic scoring	5.4(A)	MANDATORY	All DMBs must maintain automated risk scoring. Manual assessment does not meet standard.
Transaction Monitoring — real-time multi-scenario	5.5(A)	MANDATORY	Trade finance and credit products require real-time monitoring. Manual review is non-compliant.
Fraud Monitoring — integrated detection	5.6(A)	MANDATORY	DMBs must deploy fraud monitoring regardless of channel footprint. ATM/POS operations require coverage.
Case Management — ECM with audit trail	5.7(A)	MANDATORY	Manual case handling does not provide required Maker-Checker controls or immutable audit trail.

REQUIREMENT AREA	CBN REF	CATEGORY	TRIGGER FOR JOHNDUP
Regulatory Reporting — automated STR/CTR filing	5.8(A)	MANDATORY	goAML portal usage without automation does not satisfy real-time reporting requirement for DMBs.
Audit Trail — immutable logging	5.9(A)	MANDATORY	Manual audit trail does not meet immutability or completeness standards required for DMB examination.
Core Banking Integration — bidirectional real-time	5.10(A)	MANDATORY	All DMBs must integrate AML solution with core banking. Manual data extraction is non-compliant.
Data Security & Sovereignty — encryption and residency	5.11(A)	MANDATORY	No encryption deployed. Data sovereignty confirmed but security controls absent constitute critical gap.
Reporting & Analytics — real-time dashboards	5.12(A)	MANDATORY	Manual reporting does not provide board-level dashboards or regulatory analytics required for DMBs.
Board-Approved AML/CFT/CPF Policy	6.1(A)	MANDATORY	No board-approved policy in place. Mandatory for all DMBs before roadmap submission.
Formally Designated MLRO/CCO	6.2(A)	MANDATORY	No MLRO appointed. CBN requires formal designation with board approval before June 2026.
AML Solution Governance Framework	6.3(A)	MANDATORY	No governance framework documented. Required for all automated AML deployments by DMBs.
Vendor/Third-Party Management Policy	6.4(A)	MANDATORY	Vendor demos seen but no vendor management policy. Mandatory before platform procurement.
CBN Implementation Roadmap Submission	CIRCULAR PARA 8	MANDATORY	Universal deadline 10 June 2026 applies to all institutions. Non-

REQUIREMENT AREA	CBN REF	CATEGORY	TRIGGER FOR JOHNDUP
			submission triggers supervisory action.

Johndup must comply with all 17 requirement categories below. Zero conditional exemptions apply to DMB licence holders. Partial compliance is treated as non-compliance for examination purposes.

SECTION FOUR

04 Gap Analysis — 12 CBN Baseline Standards

5.1 Integrated AML Solution

CRITICAL GAP

MANDATORY — ALL DMBS | 8 CORE FUNCTIONS REQUIRED

> Johndup operates entirely manual AML processes with no integrated platform. Section 5.1 requires automated coverage of CDD, sanctions screening, transaction monitoring, fraud detection, case management, regulatory reporting, risk assessment, and audit trail. Manual processes do not constitute an integrated solution and fail to meet DMB licensing requirements.

REQUIRED ACTION

Deploy integrated AML platform covering all 8 core functions before September 2027 compliance deadline. Initiate vendor selection immediately post-roadmap submission.

REGTECH365 SOLUTION

RegPort provides turnkey integrated AML solution covering all 8 mandatory functions with pre-configured DMB workflows, real-time core banking integration, and CBN-compliant reporting templates.

→ RegPort

5.2 CDD/KYC/KYB

CRITICAL GAP

MANDATORY — ALL DMBS | BVN/NIN INTEGRATION REQUIRED

> Manual BVN lookups and manual KYC review processes do not satisfy Section 5.2 requirements. DMBs must deploy real-time automated identity verification with BVN/NIN integration, automated UBO mapping for corporate accounts, and dynamic KYC refresh triggers. Manual processes expose Johndup to identity fraud and regulatory sanctions.

REQUIRED ACTION

Implement automated CDD with real-time BVN/NIN API integration and automated UBO mapping before compliance deadline. Migrate existing customer base to automated verification.

REGTECH365 SOLUTION

RegPort includes native BVN/NIN integration via NIBSS APIs, automated UBO discovery for corporate accounts, and risk-based KYC refresh scheduling aligned with CBN tiering requirements.

→ RegPort

5.3 Sanctions & PEP Screening

CRITICAL GAP

MANDATORY — ALL DMBS | PEP EXPOSURE CONFIRMED

> Manual screening against CBN/EFCC domestic lists only is insufficient. Section 5.3 requires real-time screening against domestic and international sanctions lists including OFAC, UN, EU, and UK HMT. PEP exposure confirmed in risk profile elevates this to examination-critical deficiency. Manual processes cannot detect cross-border PEP relationships or beneficial ownership structures.

REQUIRED ACTION

Deploy real-time sanctions and PEP screening covering domestic and international lists with automated adverse media monitoring before compliance deadline.

REGTECH365 SOLUTION

RegGuard provides AI-powered real-time screening against 50+ global sanctions lists including OFAC, UN, EU, UK HMT, plus automated PEP relationship mapping and adverse media alerts.

→ RegGuard

5.4 Customer Risk Assessment

CRITICAL GAP

MANDATORY — ALL DMBS | DYNAMIC SCORING REQUIRED

> Manual customer risk assessment does not provide dynamic scoring, automated risk tiering, or event-driven re-assessment required by Section 5.4. DMBs must maintain automated risk models incorporating transaction behaviour, geographic exposure, product usage, and sanctions/PEP hits. Manual assessment cannot scale to regulatory expectations.

REQUIRED ACTION

Implement automated customer risk scoring with dynamic re-assessment triggers and board-approved risk appetite thresholds before compliance deadline.

REGTECH365 SOLUTION

RegPort includes configurable risk scoring engine with 40+ risk factors, automated tiering aligned with CBN categories, and event-driven re-assessment for material changes.

→ RegPort

5.5 Transaction Monitoring

CRITICAL GAP

MANDATORY — ALL DMBS | TRADE FINANCE EXPOSURE

> Manual transaction review does not satisfy Section 5.5 requirements for real-time multi-scenario monitoring. Trade finance products require automated detection of structuring, layering, round-tripping, and trade-based money laundering typologies. Manual processes cannot identify complex patterns across customer networks or detect real-time suspicious activity.

REQUIRED ACTION

Deploy real-time transaction monitoring with pre-configured trade finance scenarios and network analysis before compliance deadline. Integrate with core banking for real-time data feeds.

REGTECH365 SOLUTION

RegPort provides 60+ pre-configured monitoring scenarios including trade finance typologies, real-time network analysis, and automated alert generation with risk-based prioritisation.

→ RegPort

5.6 Fraud Monitoring

CRITICAL GAP

MANDATORY — ALL DMBS | ATM/POS CHANNEL RISK

> No fraud monitoring capability deployed. Section 5.6 requires integrated fraud detection with bidirectional feed to customer risk assessment. ATM/POS channel operations expose Johndup to card fraud, account takeover, and synthetic identity fraud. Absence of fraud monitoring creates immediate operational and reputational risk.

REQUIRED ACTION

Implement real-time fraud monitoring integrated with AML platform and customer risk engine before compliance deadline. Deploy device fingerprinting and behavioural analytics for ATM/POS channels.

REGTECH365 SOLUTION

RegGuard provides real-time fraud detection with machine learning models for card fraud, account takeover, and synthetic identity detection, plus automated risk score updates.

→ RegGuard

5.7 Case Management

CRITICAL GAP

MANDATORY — ALL DMBS | MAKER-CHECKER REQUIRED

> Manual case handling does not provide Enterprise Case Management with Maker-Checker controls, immutable audit trail, or automated escalation workflows required by Section 5.7. DMBs must maintain full investigation lifecycle management with documented approval chains and regulatory evidence packs. Manual processes cannot demonstrate examination-ready case documentation.

REQUIRED ACTION

Deploy ECM platform with Maker-Checker controls, automated escalation, and immutable audit trail before compliance deadline. Migrate open investigations to automated system.

REGTECH365 SOLUTION

RegPort includes full ECM module with configurable Maker-Checker workflows, automated escalation rules, immutable audit trail, and one-click STR generation from case files.

→ RegPort

5.8 Regulatory Reporting

CRITICAL GAP

MANDATORY — ALL DMBS | AUTOMATED FILING REQUIRED

> Manual goAML portal usage with informal approval process does not satisfy Section 5.8 requirements. DMBs must deploy automated STR/CTR generation with documented approval workflows and real-time filing capability. Informal approval processes create regulatory risk and cannot demonstrate compliance with filing deadlines.

REQUIRED ACTION

Implement automated regulatory reporting with documented approval workflows and direct goAML integration before compliance deadline. Establish formal MLRO sign-off process.

REGTECH365 SOLUTION

RegComply automates STR/CTR generation from case files, enforces documented approval workflows, and provides direct goAML API integration for real-time filing with delivery confirmation.

→ RegComply

5.9 Audit Trail

CRITICAL GAP

MANDATORY — ALL DMBS | INTERNAL AUDIT COVERAGE REQUIRED

> Manual audit trail does not provide immutable logging, tamper-proof evidence, or comprehensive activity tracking required by Section 5.9. AML not covered by internal audit constitutes dual critical gap. DMBs must maintain complete audit trail of all AML activities with internal audit review at least twice yearly.

REQUIRED ACTION

Deploy immutable audit trail capability and establish internal audit coverage of AML processes before compliance deadline. Conduct initial AML audit within 90 days of platform deployment.

REGTECH365 SOLUTION

RegPort provides blockchain-anchored immutable audit trail capturing all system activities, user actions, and configuration changes with tamper-proof evidence for examination purposes.

→ RegPort

5.10 Core Banking Integration

CRITICAL GAP

MANDATORY — ALL DMBS | REAL-TIME INTEGRATION REQUIRED

> No automated core banking integration exists. Section 5.10 requires bidirectional real-time integration for customer data, transaction feeds, and risk score updates. Manual data extraction creates latency, data quality issues, and prevents real-time monitoring required for DMB operations.

REQUIRED ACTION

Establish bidirectional real-time integration between AML platform and core banking system before compliance deadline. Implement automated data validation and reconciliation controls.

REGTECH365 SOLUTION

RegPort includes pre-built connectors for major core banking platforms used in Nigeria with bidirectional real-time APIs, automated data validation, and reconciliation dashboards.

→ RegPort

5.11 Data Security & Sovereignty

CRITICAL GAP

MANDATORY — ALL DMBS | ENCRYPTION REQUIRED

> No encryption deployed and MFA not enforced constitute critical security gaps. Section 5.11 requires encryption at rest and in transit, MFA for all users, and Nigeria data residency. Data sovereignty confirmed but absence of encryption and MFA creates immediate data breach risk and regulatory non-compliance.

REQUIRED ACTION

Implement full encryption at rest and in transit, enforce MFA for all AML system users, and conduct security audit before compliance deadline.

REGTECH365 SOLUTION

RegPort deploys with AES-256 encryption at rest, TLS 1.3 in transit, mandatory MFA, and Nigeria-based cloud infrastructure meeting CBN data sovereignty requirements.

→ RegPort

5.12 Reporting & Analytics

CRITICAL GAP

MANDATORY — ALL DMBS | BOARD DASHBOARDS REQUIRED

> Manual reporting does not provide real-time dashboards, board-level analytics, or regulatory reporting templates required by Section 5.12. DMBs must maintain automated dashboards for MLRO, board, and CBN examination purposes with drill-down capability and trend analysis.

REQUIRED ACTION

Deploy automated reporting and analytics platform with board dashboards and regulatory templates before compliance deadline. Establish monthly board reporting cadence.

REGTECH365 SOLUTION

RegPort includes pre-configured dashboards for MLRO, board, and regulators with real-time KPIs, trend analysis, and one-click regulatory report generation.

→ RegPort

SECTION FIVE

05 Governance Assessment — Section 6 Controls

Johndup has zero governance controls in place. No MLRO appointed, no board-approved policy, no documented frameworks. This constitutes examination-critical deficiency requiring immediate remediation before roadmap submission.

0%

Governance Score — Critical Gap

0/10 governance controls in place represents critical non-compliance. CBN requires foundational governance baseline before platform deployment. Absence of MLRO and board policy alone triggers supervisory intervention risk.

GOVERNANCE CONTROL	CBN REF	CATEGORY	JOHNDUP STATUS	ACTION REQUIRED
Formally designated MLRO or CCO	6.2(A)	MANDATORY	Not in place	Appoint MLRO with board approval before roadmap submission deadline.
Board-approved AML/CFT/CPF Policy	6.1(A)	MANDATORY	Not in place	Draft and obtain board approval for comprehensive AML policy before June 2026.
Documented AML Solution Governance Framework	6.3(A)	MANDATORY	Not in place	Develop governance framework covering roles, escalation, and oversight before platform deployment.
Formal Change Control for AML Configurations	6.3(B)	MANDATORY	Not in place	Establish change control process with Maker-Checker approval before platform go-live.
Model Governance Committee for AI/ML	6.5(A)	CONDITIONAL	Not in place	Not immediately required. Establish if AI/ML capabilities deployed in future.
Documented Alert Review SLAs	5.7(B)	MANDATORY	Not in place	Document alert review SLAs aligned with risk tiering before platform deployment.
Vendor/Third-Party Management Policy	6.4(A)	MANDATORY	Not in place	Adopt vendor management policy before platform procurement and contracting.
Data Retention and Destruction Policy	5.11(C)	MANDATORY	Not in place	Document data retention policy aligned with CBN 7-year requirement before platform deployment.
BVN/NIN Integration	5.2(B)	MANDATORY	Not in place	Establish real-time BVN/NIN integration via

GOVERNANCE CONTROL	CBN REF	CATEGORY	JOHNDUP STATUS	ACTION REQUIRED
				NIBSS APIs before compliance deadline.
AML Training Programme with Documented Records	6.6(A)	MANDATORY	Not in place	Deploy AML training programme with attendance tracking before compliance deadline.

SECTION SIX

06 Top 5 Priority Actions

01 CBN Implementation Roadmap Submission

HARD DEADLINE: 10 JUNE 2026 · MANDATORY FOR ALL INSTITUTIONS

Johndup must submit the CBN Implementation Roadmap Template by 10 June 2026. This is a universal non-negotiable deadline applying to all financial institutions regardless of implementation status. The roadmap must cover 12 sections including executive summary, gap analysis, implementation strategy, timeline, resource plan, governance framework, and board sign-off. Incomplete or missing submissions constitute regulatory non-compliance and trigger immediate supervisory action. OPEX Consulting can complete the CBN template using findings from this assessment. We provide turnkey roadmap preparation including gap analysis documentation, phased implementation timeline, resource planning, and board presentation materials. Roadmap completion typically requires 2-3 weeks from engagement to final board approval.

02 MLRO/CCO Appointment

CRITICAL: REQUIRED BEFORE ROADMAP SUBMISSION

CBN Circular requires formal MLRO or CCO designation with board approval before roadmap submission. The MLRO must be a senior officer with direct board reporting line, authority to halt suspicious transactions, and independence from business units. Job description must specify AML/CFT responsibilities, qualifications, and reporting obligations. OPEX Consulting provides interim MLRO services during recruitment and can draft job descriptions, board resolutions, and MLRO terms of reference aligned with CBN requirements. We also offer MLRO training and certification preparation.

03 Board-Approved AML/CFT/CPF Policy

CRITICAL: REQUIRED BEFORE ROADMAP SUBMISSION

Johndup must obtain board approval for comprehensive AML/CFT/CPF policy before June 2026 roadmap deadline. The policy must cover customer due diligence, sanctions screening, transaction monitoring, suspicious activity reporting, record retention, training, and governance. Policy must be tailored to Johndup's DMB licence, product profile, and risk factors. OPEX Consulting drafts CBN-compliant AML policies customised to institution type and risk profile. We provide policy templates, board presentation materials, and implementation guidance. Policy development typically requires 3-4 weeks from kickoff to board approval.

04 AML Platform Selection and Procurement

TARGET: Q3 2026 · DEPLOYMENT BY Q2 2027

Johndup has seen vendor demos but requires formal platform selection aligned with budget constraints. Platform must cover all 8 core functions required by Section 5.1 with real-time core banking integration, BVN/NIN APIs, and Nigeria data residency. Procurement must follow documented vendor management process. OPEX Consulting provides vendor evaluation support including RFP preparation, demo facilitation, scoring matrix development, and contract negotiation. We maintain vendor-neutral advisory stance and can guide RegTech365 product evaluation alongside alternatives. Budget-conscious institutions benefit from our procurement optimisation and phased deployment strategies.

05 Internal Audit Coverage of AML

TARGET: INITIAL AUDIT Q4 2026

AML currently not covered by internal audit. CBN requires internal audit review of AML processes at least twice yearly with documented findings and remediation tracking. First audit should occur within 90 days of platform deployment to validate configuration, test scenarios, and verify governance controls. OPEX Consulting offers internal audit co-sourcing for AML/CFT including audit planning, fieldwork execution, findings documentation, and remediation tracking. We provide CBN-aligned audit programmes and can train internal audit teams on AML examination techniques.

SECTION SEVEN

07 Recommended Implementation Roadmap

This roadmap guides Johndup from current manual processes to full CBN compliance by September 2027. Four phases span 18 months covering governance foundation, platform deployment, integration, and examination readiness.

PHASE 1 NOW – 10 JUNE 2026

Foundation & Roadmap Submission

Establish governance baseline and submit CBN roadmap. Appoint MLRO with board approval. Draft and approve AML/CFT/CPF policy. Document vendor management policy. Complete CBN Implementation Roadmap Template covering all 12 sections. Obtain board sign-off and submit to CBN Compliance Department by 10 June 2026 deadline.

- MLRO appointment with board resolution
- Board-approved AML/CFT/CPF Policy
- Vendor Management Policy
- CBN Implementation Roadmap submitted

PHASE 2 JUNE 2026 – SEPTEMBER 2026

Governance & Architecture

Complete governance framework and design technical architecture. Document AML Solution Governance Framework covering roles, escalation, and oversight. Establish change control process with Maker-Checker approval. Design core banking integration architecture. Develop data retention policy. Document alert review SLAs. Conduct vendor selection and contract negotiation.

- AML Solution Governance Framework
- Change Control Process documented
- Core banking integration design
- Data Retention Policy
- Alert Review SLAs documented
- Vendor contract executed

PHASE 3 OCTOBER 2026 – JUNE 2027

Platform Deployment & Integration

Deploy integrated AML platform and establish core integrations. Implement RegPort covering CDD, sanctions screening, transaction monitoring, case management, and regulatory reporting. Deploy RegGuard for fraud monitoring. Establish real-time BVN/NIN integration via NIBSS APIs. Configure bidirectional core banking integration. Implement encryption and MFA. Migrate existing customer base to automated CDD. Configure monitoring scenarios for trade finance and retail banking. Conduct user acceptance testing.

- RegPort platform deployed
- RegGuard fraud monitoring live
- BVN/NIN real-time integration
- Core banking integration operational
- Encryption and MFA enforced
- Customer base migrated to automated CDD
- Monitoring scenarios configured and tested

PHASE 4 JULY 2027 – SEPTEMBER 2027

Assurance & Examination Readiness

Validate compliance and prepare for CBN examination. Conduct internal audit of AML processes with documented findings. Deploy AML training programme via RegLearn with attendance tracking. Prepare

examination evidence pack covering all 12 standards. Conduct board AML briefing with compliance dashboard review. Validate immutable audit trail and regulatory reporting workflows. Conduct dry-run CBN examination simulation. Remediate any findings before compliance deadline.

Internal audit report with findings | AML training programme deployed | Examination evidence pack prepared | Board AML compliance briefing | Audit trail validation completed | Dry-run examination conducted | All findings remediated

MILESTONE	TARGET DATE	OWNER
MLRO appointed and board-approved AML policy in place	31 May 2026	Board of Directors
CBN Implementation Roadmap submitted	10 June 2026	MLRO / Compliance
Vendor contract executed and governance framework documented	30 September 2026	MLRO / IT
Platform deployment complete with core banking integration live	30 June 2027	IT / Compliance
Internal audit completed and training programme deployed	31 August 2027	Internal Audit / MLRO
Full CBN compliance achieved and examination-ready	30 September 2027	MLRO / Board

SECTION EIGHT

08 RegTech365 Product Suite & Advisory

OPEX Consulting and RegTech365 provide end-to-end support for Johndup's AML transformation. We combine regulatory advisory, platform deployment, and ongoing assurance to deliver turnkey CBN compliance within budget constraints.

What makes this different. OPEX Consulting is the only Nigerian advisory firm offering integrated RegTech365 deployment with CBN roadmap preparation, policy drafting, and internal audit co-sourcing. We understand DMB budget realities and structure phased implementations aligned with cash flow.

RE

RegPort

Integrated AML Platform for CBN Baseline Standards Compliance

5.1 — Integrated AML Solution | 5.2 — CDD/KYC/KYB | 5.4 — Customer Risk Assessment | 5.5 — Transaction Monitoring | 5.7 — Case Management | 5.9 — Audit Trail | 5.10 — Core Banking Integration | 5.11 — Data Security | 5.12 — Reporting & Analytics

RegPort unifies CDD/KYC, sanctions/PEP screening, transaction monitoring, customer risk assessment, and regulatory reporting in a single platform. The platform is purpose-built for Nigerian financial institutions, featuring real-time BVN/NIN integration via NIBSS, automated goAML/NFIU filing, and AI-enabled fuzzy matching for international sanctions lists.

RE

RegGuard

Real-Time Fraud Monitoring with Bidirectional Risk Feed

5.3 — Sanctions & PEP Screening | 5.6 — Fraud Monitoring

RegGuard provides real-time fraud monitoring for card issuance, mobile money, and agent network channels. It detects pattern-based fraud like SIM swap attacks and account takeover, with an automated feed that pushes fraud alerts directly into customer risk scores to identify money laundering disguised as fraud.

RE

RegComply

Enterprise Case Management with Immutable Audit Trails

5.8 — Regulatory Reporting

RegComply delivers the mandatory Case Management and Governance Audit layer. It enforces Maker-Checker workflows for investigation, provides role-based access for MLROs, and maintains tamper-proof audit logs of all configuration changes and alert dispositions required for CBN examination.

RE

RegLearn

AML Training Programme with Documented Records

6.6 — AML Training Programme

RegLearn provides role-specific AML/CFT/CPF training modules covering the 12 Baseline Standards. The platform tracks staff completion, assessment scores, and certification status, producing the documented training records specifically mandated under Section 6.7 of the Circular.

OPEX Consulting Advisory Services

- **CBN Roadmap Template completion** — End-to-end support in completing and validating the mandatory 12-section roadmap for June 10th submission.
- **MLRO appointment advisory** — Guidance on role definition, reporting lines, and CBN notification for newly appointed MLROs.
- **ISO 27001 and 42001 alignment** — Gap analysis and implementation support for international security and AI governance standards.
- **Governance framework drafting** — Drafting of AML Solution Governance, Change Control, and Data Retention policies.
- **Trade Finance AML Configuration** — Scenario design and tuning for trade-based money laundering detection specific to Johndup's trade finance products.
- **AML/CFT/CPF policy drafting** — Development of Board-approved policies aligned with the new 2026 Baseline Standards and ISO 42001.
- **Evidence pack preparation** — Compilation of all technical and governance documentation into an audit-ready format for CBN examination.
- **Vendor due diligence** — Structured evaluation of RegTech platform providers against CBN technical requirements.
- **DMB-Specific Budget Optimisation** — Phased deployment strategies aligned with cash flow constraints and capital planning cycles for smaller DMBs.

Start Your Compliance Journey

OPEX Consulting can complete your CBN roadmap and guide platform selection within 3 weeks.
